

Practical Round Question Set

1. Write a program to get the next prime number after number given by user

For example, if a user enters 7, then the following prime number should display as 11

2. Write a program to print sequence of squares of odd numbers starting from 1

For example, if a user enters 3, it will display the square of the first 3 odd numbers like – 1, 9, and 25.

3. Write a program to calculate total number of odd numbers till number given by user.

For example, if a user enters 5, the output should display 3, as there will be 3 odd numbers until 5 – 1, 3, 5.
